

# Mass Spectrometry and Gas Chromatography

Weshine® is New Brand and Fast rising in the Electric Area.Relying on High-Quality product and Efficient after-sales service to win the trust of the customers.Weshine is your trusted manufacturer and supplier in China.Our Mass Spectrometry and Gas Chromatography can help you to do the gas analysis

works very well, especially the after-sales service is Excellent. Looking forward to have a good and long partnership with you.

#### Weshine® Mass Spectrometry and Gas Chromatography

#### Product Introduction:

Weshine® VS-9808 Mass Spectrometry and Gas Chromatography specializes in the analysis of gases in transformer insulating oil. The Mass Spectrometry and Gas Chromatography can analyze 7/9/11 kinds of gas components in the insulating oil through two or three chromatographic columns. If there are many oil samples

needed to be tested, then the Headspace Autosampler can help to extract the gases from the oil for the Mass Spectrometry and Gas Chromatography . 27/72 Samples can be shocked and heated, and then transmit the gases automatically by the Autosampler. It can help the Mass Spectrometry and Gas Chromatography a lot, and save labor cost and time cost. The software of the Mass Spectrometry and Gas Chromatography is easy to operate, we can provide online video guidance and remote assistance. Please enjoy our 7days\*24hours after-sales service.

#### Product Parameter:

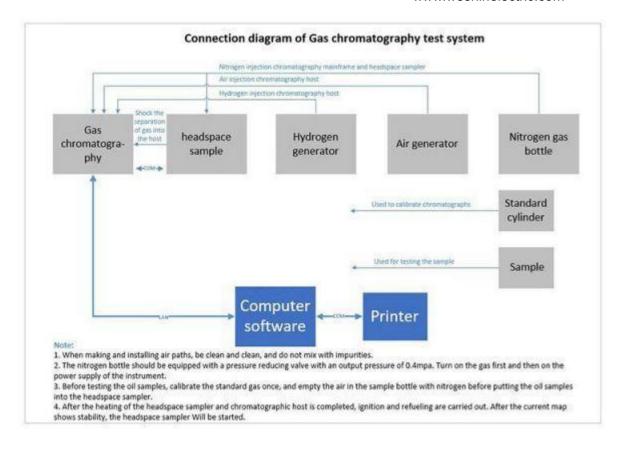

| Operating display        | 192*64 periodic lattice liquid crystal |
|--------------------------|--|
| Temperature control area | 6 ways                                 |
| Temperature              | 5°C~400°C                              |
| Programming              | Rate 0.1 ~ 39 ℃/min                    |
| External events          | 4 ways                                 |
| Detector                 | FID, TCD,ECD, FPD and NPD              |
| Communication interface  | Ethernet: IEEE802.3                    |

#### Product Feature:

Mass Spectrometry and Gas Chromatography mainly analysis the gases components from the transformer insulating oil. Mass Spectrometry and Gas Chromatography works with the Air Generator, Hydrogen Generator, and Oscillator. The Oscillator shocks and heats up the oil sample to get the gas from the oil. And then inject the gas sample into the Mass Spectrometry and Gas Chromatography. Before that, we should use the Air Generator and Hydrogen Generator to fire the FID1 and FID2. The Mass Spectrometry and Gas Chromatography will analysis the gas sample automatically, and you will see the gases components waves on the software on PC. The test report can be printed by the printer from the Mass Spectrometry and Gas Chromatography.

#### Product details:

# For Headspace Sampler:

The Autosampler can extracts the gases from the insulating oils, and transmit the gases by carrier gas to the Mass Spectrometry and Gas Chromatography Columns.It has the function of the heating and shocking, instead of the manual oscillator.

#### Details of the Vials

| Number of vials | 27/72                          |
|-----------------|--------------------------------|
| Vial Material   | Neutral Glass                  |
| Vial volume     | 20ml                           |
| Vial Septum     | PTFE coated with butene rubber |

Weshine Electric Manufacturing Co., Ltd.

Address:Diangu Technology Center, No. 3088, Lekai North Street

Tel:+86-312-3188565 Phone:+86-18731260588

E-mail:sale09@weshinelectric.com

|                   | PTFE coated with silicone rubber |
|-------------------|----------------------------------|
| Vial Aluminum Cap | Aluminum                         |

#### For Oscillator:

The Oscillator heats and shocks the transformer oil to extract the gases from the transformer insulating oils automatically. The temperature and times can be set. Put the 40ml oils into the 100ml-injector, and then put 8 injectors at max into the oscillator to start the extraction works.

### For Hydrogen Generator:

This Hydrogen Generator make the hydrogen for the Mass Spectrometry and Gas Chromatography, the hydrogen can help to fire the FID1 and FID2.

For the Air Generator:

The Air Generator provides the air for the Mass Spectrometry and Gas Chromatography to help the Hydrogen firing.
